Response to Arguments

Allowable Subject Matter

Claims 1, 4-27, and 55-56 are allowed.

The following is an examiner's statement of reasons for allowance: claims 1, 4-27, and 55-56 are allowed because the references cited fail to teach, as applicant has, a transmitter using a decimator providing one sample for every r samples output by a inverse Fast Fourier transform circuit with $r = N/n$, ($N = 4096/p$, $p = 1, 2, 4, 8, \dots$; $n =$ first number of tones used among N); a digital-to-analog converter coupled between the decimator and a subscriber lines comprising on the receiver side an analog-to-digital converter sampling the signal on the subscriber line at a frequency F/r , where F is the

operating frequency of the inverse fast Fourier transform circuit; an interpolator generating samples at frequency F from the samples provided by the analog-to-digital converter; and a fast Fourier transform circuit operating at frequency F and receiving the samples from the interpolator through a time domain equalizer, as the applicant has claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
